

# To rent or not to buy, that is the question.

Atlas Copco Specialty Rental is the provider of 100% oil-free and high-pressure compressed air to the industry.

When there is a demand for extra power or air, or the need to keep a process going when inhouse facilities are down for maintenance or repair, Atlas Copco Specialty Rental can step in with a rental package that will allow a process to continue or expand with minimized disruption to productivity. Our portfolio also includes accessories: Fuel tanks, dryers, aftercoolers, pressure reducers, air-receivers, collectors, hoses, remote control boxes.

## Why rent accessories?

For your end product quality for one. Dryers and filters take moisture and particles out of the compressed air to assure clean, dry air. External fuel tanks avoid re-fuelling every other shift giving you more peace of mind. All our accessories are available off the shelf, making it possible to get the necessary equipment to you on short notice and fast.

## But why rent accessories?

In geographically mobile industries, uncertain business climates, expansion periods, long term rental is a good solution, because we can offer the right equipment, in the right place, when needed and for the needed time. This allows you to control your expenses and conserve capital because you can save on warehousing, costly repairs or upkeep and disposal costs. Having the right equipment for the job exactly when you need it thanks to our 24/7 industrial equipment service, you reduce down time. Also you are not bothered with licenses or equipment tracking. That is all part of our accessories rental offer. These are answers to your question whether to buy or to rent.

### Fuel tanks

Atlas Copco Specialty Rental offers a complete line of fuel tanks for rent for multiple compressor applications. With the purpose to extend the re-fuelling time, these allow a more continuous production (up to 3 shifts instead of one).

### Remote control box

The remote control box allows the operator to operate the compressor from a distance. Offering better safety, including remote emergency stop, remote control results in a more efficient operation of the PT/PN range from the control room.

### Hose

Genuine Atlas Copco hoses are designed to withstand the strains of demolition work and are available in standard and special lengths. A spiral steel wire protects the hose against damage caused by the material being cut.

### Dryer

Atlas Copco Specialty Rental offers a wide range of desiccant or refrigerant dryers that extract moisture out of the compressed air to ensure that condensation can't damage your airnet, machinery or finished product.

Our heatless regeneration dryer is designed to match the oil-free PT/PN range. It is one of the most reliable dryers in the world.

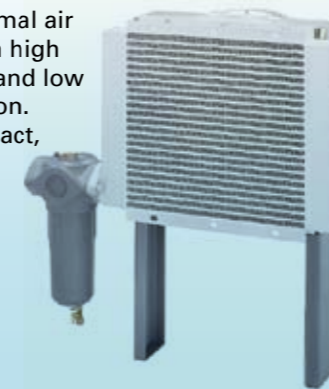

### Air receiver

Air Receivers store compressed air for peak demand in excess of compressor flow rate. They increase the cooling of the compressed air and collect possible residual condensate and oil droplets. The pressure variations in your airnet will be equalized and short cycle loading and unloading of your compressor minimized.

### Aftercooler

Atlas Copco Specialty Rental offers a range of after-coolers that combine minimal air pressure drop with high cooling efficiency and low energy consumption. They are compact, simple to install and easy to dismantle for cleaning.

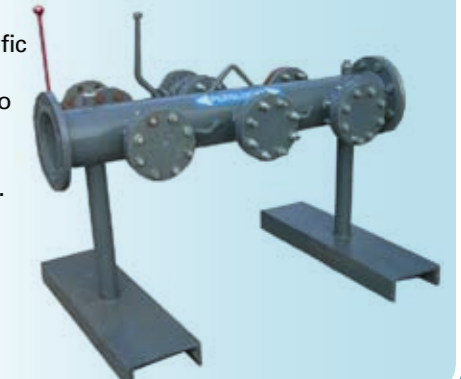

### Pressure reducer

For high pressure units, our pressure reducers limit the operating pressure to the pressure you require. As such they allow the operation of hand held pneumatic tools.

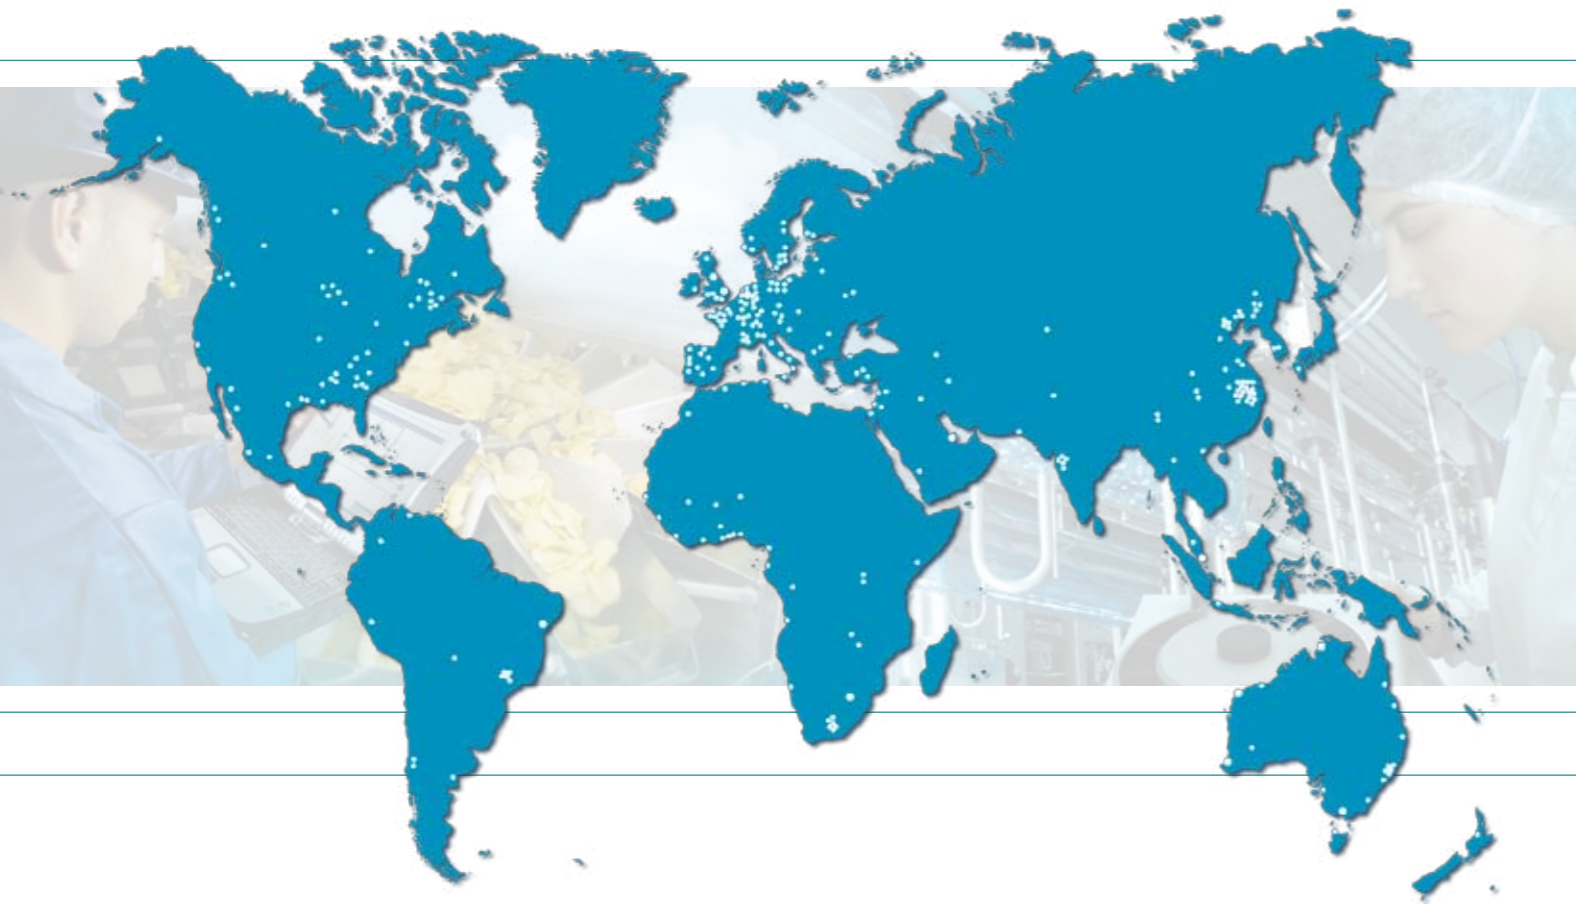

### Collector

Depending on your specific needs our wide range of collectors can be linked to several compressors in order to provide for as much pressure you need.

# Rental product solutions offered by Atlas Copco Specialty Rental

# Atlas Copco Specialty Rental

**Atlas Copco Specialty Rental** is the leader in 100% oil-free and oil-injected air compressor rentals and maintains a strong commitment to customer service and availability, with locations across the world. Our highly trained service technicians speak your language and are readily accessible when you work with the Atlas Copco Specialty Rental team 24/7.

**Atlas Copco Specialty Rental** responds to the needs of industry by providing temporary air solutions to help minimize downtime and maximize production: we are the best source of rental equipment to provide 100% oil-free compressed air for both your short- and long-term demands. We provide the most effective solutions for planned contingencies or unexpected emergencies. For reliable, cost-efficient solutions to your compressed-air needs, call on the experienced team at Atlas Copco Specialty Rental. Let us show you how to be productive and save money.

#### Tough Standards

The Specialty Rental Division has been granted triple certification to ISO 9001:2000, ISO 14001:2004 and OHSAS 18001 for Quality, Environmental and Occupational Health & Safety Management by Lloyd's Register Quality Assurance (LRQA). This triple certification demonstrates our commitment to the quality of our services, our care for the environmental impact of our operations and the health of our employees and customers.
